

Shake, Rattle, and Roll!

1. What do earthquakes and volcanoes have in common?

- They're both caused by movements of tectonic plates
- They both happen when tectonic plates get stuck
- They happen when tectonic plates meet at the land and the ocean

2. What are some ways in which volcanoes and earthquakes are different?

3. What's the name of the area where most of the world's earthquakes and eruptions occur?

4. People who live in earthquake-prone areas keep an emergency kit that has enough supplies to last their family for at least three days. What do you think should be included in a kit like that?

Food	Clothes/Toiletries	Other

5. Have you ever felt an earthquake, or seen a volcano? If yes, what was it like? If no, what questions would you have for someone who had?
